

Training Syllabus

Advanced Topics in Inventory Management for Maximo v.5.2

This is a one-day class that focuses on the advanced functions of inventory management. Training topics include using Maximo for inventory cycle counting, managing rotatable spares, tracking item specifications, advanced querying concepts and inventory performance indicators for management. Intensive use of hands-on exercises using a fully populated Maximo installation will provide the student with practical experience.

Prerequisite: Inventory Management Introduction or equivalent experience required.

- A. Overview and expected outcomes
- B. Rotatable spares
 - 1. Rotatable spares, how Maximo manages
 - 2. Setting up rotatable spares in Maximo
 - 3. Using rotatable spares (exercise)
- C. Advanced queries in Maximo
 - 1. Multi-field queries
 - 2. SQL and saved queries
- D. Inventory performance indicators with Maximo
 - 1. Using Maximo to measure:
 - a) Stock-outs
 - b) Inventory turnover
 - c) Obsolete inventory

- E. How to set up and use inventory cycle counting with Maximo
- F. The Maximo asset catalog
 - a) Setting up the asset catalog
 - b) Using the asset catalog
