

Training Syllabus

Tailoring IBM Maximo 6 Using Application Designer

This two day course shows participants how to create applications and how to customize IBM Maximo applications using the Application Designer, the Database Configuration, and the Domains applications.

Prerequisites for this class include: At least a general knowledge of IBM Maximo 6. We recommend Basic Maximo 6.

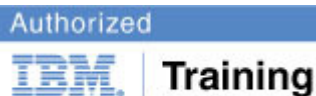

Course Outline

This course contains the following topics:

- Managing and creating domains
- Configuring the database
- Using the Application Designer
- Cloning an application
- Creating a new application with Database Configuration
- Creating a new power application
- Tailoring an application
- Modifying the List tab
- Exporting and importing an application
- Deleting a user-created application

After completing this course, you should be able to:

- Create and modify domains
- Create a new database object
- Create and modify the attributes of an object

- Create an index and a relationship for an object
- Configure the database
- Navigate the Application Designer application
- Add and modify controls of an existing application
- Clone an application and modify it
- Create a power application and add controls
- Add Signature Security options
- Add Select Action menu items
- Add Toolbar buttons
- Create a Search menu
- Modify the List tab of an application
- Grant access to an application
- Import/export an application
- Delete a user-created application
- Create a single tab application (workshop)
